

Mock Arrest

A patient having a cardiac arrest can be an extremely stressful event for all concerned.

The opportunity to practice the essential technical skills and human factors required to manage such an emergency in a 'safe environment' is invaluable to all members of the healthcare team.

Our high fidelity adult manikin can be placed in any clinical area (adult or paediatric), our Faculty 'declare the emergency' and then let your team take over and do the rest.

Team training focusing on cardiac arrest...

Montagu Clinical Simulation Centre is pleased to offer opportunities for clinical teams to practice cardiac arrest scenarios in their own unit using a mobile high fidelity adult manikin.

To book a course for your team please contact:

clinical.simulation@dbh.nhs.uk

or call us on 01709 649106
